Six rules for AI documents that look good.

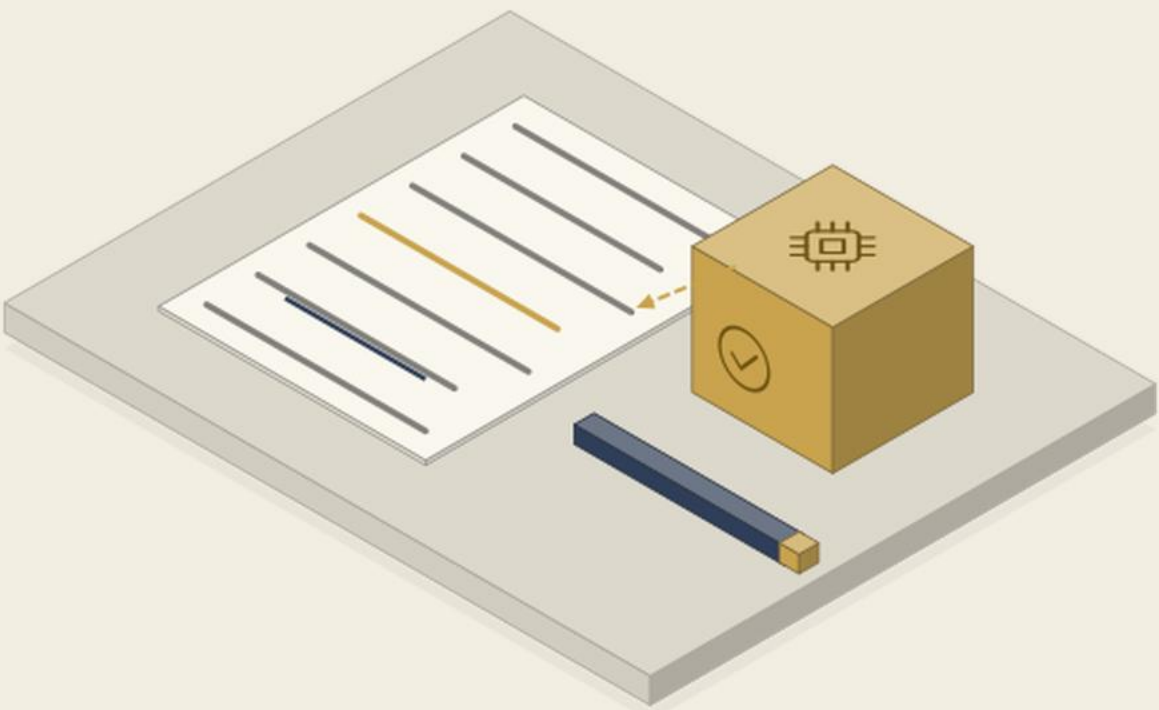

Claude or ChatGPT. Set them once, use them on every document.

1

Set the page size.

Letter, one page. That's not going anywhere, so the rule never changes.

2

Give it the outline.

Start from an outline that worked. No outline? 3 to 5 plain headings.

3

Fewer words.

Under 300 words a page. One idea per section. A small table when it saves words.

4

Show it how you write.

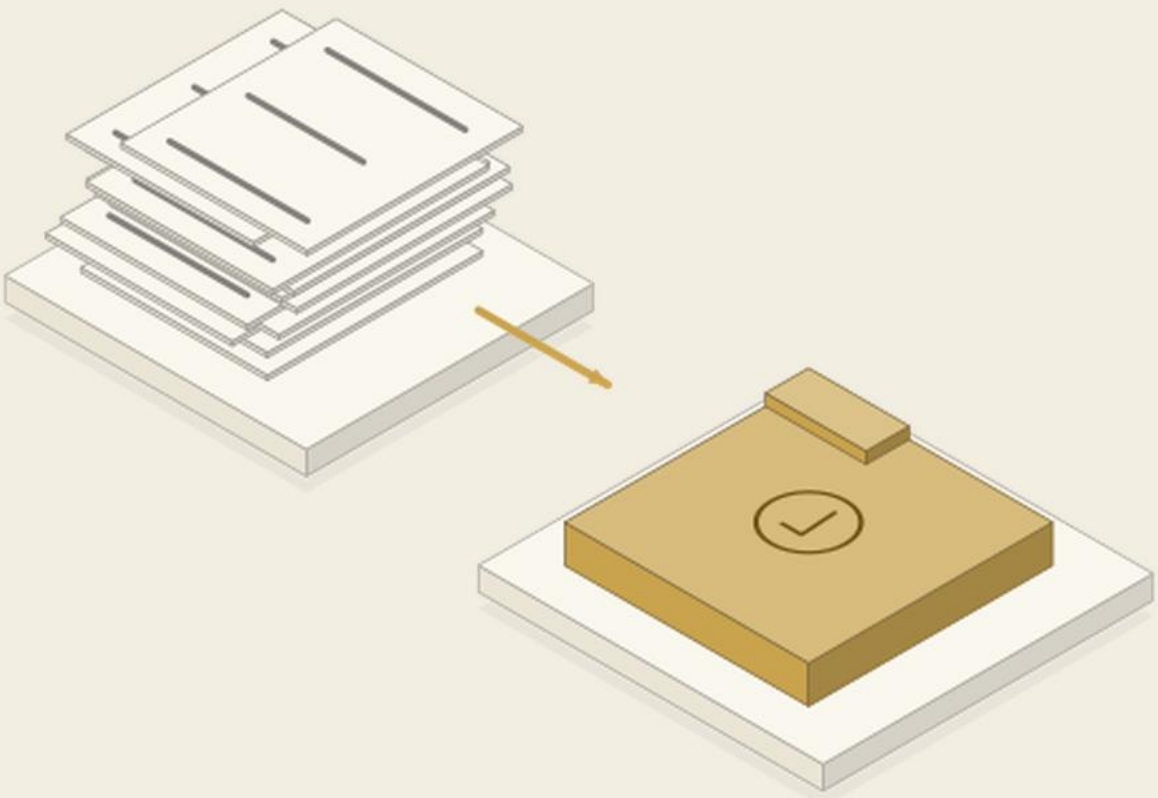

A few things you wrote. Same tone, same sentence length, same words.

5

Hand it your assets.

Your logo, colors, font and the pictures you approved. Nothing invented.

6

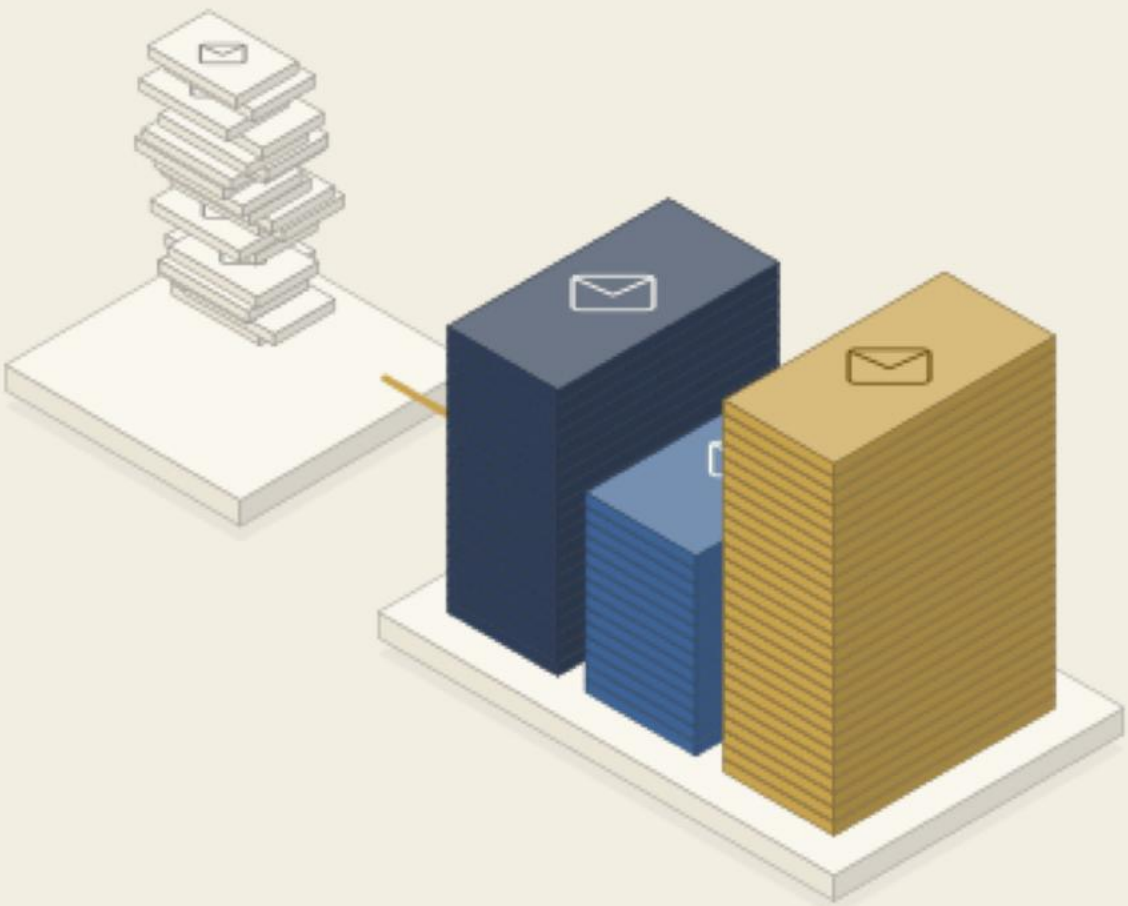

Make it check its work.

Every fact comes from your notes. Under the PDF, a list of anything it guessed.

Put the rules in a project.

Then every document is one line: “Welcome sheet for new clients.”

The kit is free.

The rules, blank files to fill in, and the sample we built live.
